

Be Sewer Smart!

Prevent Backups and Backflows

We believe that backups and backflows – in spite of our best collective efforts – can and will occur, and when they do, **the worst place for backups is in a home or business.**

We support:

- 1** **Regulatory standards** for sanitary sewer system and maintenance, designed **to prevent sewer backflows.**
- 2** **Professional standards and training** for quickly responding to and effectively mitigating the effects of sanitary sewer backups and overflows.
- 3** **Protecting the public** from sewer backups and backflows **by requiring backflow prevention devices**, including cleanout overflow devices.
- 4** **Education on the risks and prevention** of sewer backups.
